

Chapter 6 Custom production Linux kernel and filesystem

Linux kernel appeared large. Beginners and proficient having to learn the beginning of a broad array of kernel drilling in source code to ask the sword, however some proficient used common configuration, and download to the development board and run, summit of your Linux system towards the must proceed path.

All the steps in this section are not involved in coding content, but please do not ignore them for beginners. Because learning SCM systems like Linux, if you do not have basis, then you learn to configure, compile and download running begin.

The following operations are based on Fedora 9 platform.

Note: This development boards with the latest version of the Linux-2.6.32.2 kernel
